

administration. Today 9 still have neurological deficits and 30 odd are under careful follow up. The milk manufacturer Humana claims it stopped adding synthetic thiamine on the belief that soy had sufficient natural thiamine. The financial compensation will be anywhere between \$15 million and \$25 million. Is the rampant use of soy milk for the faintest suspicion of cow milk allergy acceptable? Shouldn't baby foods be considered "sensitive

products" that need regular sampling and testing like drugs? Milk is the eternal passion of the pediatrician and will remain the eternal problem (BMJ 13 November 2004; 329: 1128).
